

a [at least one second decoder for decoding] received paging messages [message] when addressed to the paging unit; and

[at least one third decoder for decoding received page messages when said paging messages are designated to one or more groups the paging units is a part of; and]
a paging unit controller for enabling said determining mean and sending means.

✓ Please add new Claims 59-61 as follows:

Sub 011
59. The system according to Claim 22 wherein said sending means of the paging units representing two-way paging units is capable of communicating through a telephonic-based connection to the controller when the paging unit is located in the coverage area of any one of the transmission systems.

60. The system according to Claim 1 wherein the system message is embedded in the radio paging protocol used by one or more of said transmission systems.

61. The method according to Claim 53 wherein the system message sent by each of the transmission systems is embedded in the radio paging protocol used by at least one of said transmission systems.

Remarks

Applicant requests that the above amendment be entered into the application for consideration by the Examiner.

Please charge deposit account 08-0865 for the additional filing fee of \$27.00 for Claim 59-61.

Respectfully submitted,

Dated: 9/1/99
